

Flex-Z was developed to meet the great demand from our customers working in a polyester moulding environment, who daily seems to have huge problems with pre-release, shrinkage and streaking from the traditional Semi-permanent Release systems, and therefore had to go back using ordinary Waxes, though it required much harder work and increased their mould prep time considerably.

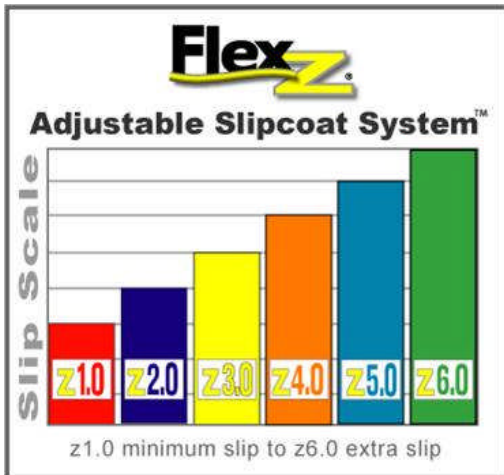

Flex-Z allows the moulder - **for the first time in polyester moulding history** - to apply the level of release performance needed over an entire mould, or in each specific area of **ANY mould or process**.

And best of all: The products are **Odorless and free of HAP's** ("Harzardeus Air Polution")

Advantages:

- Each product identified by number and colour
- Quickly see where each product fits on the Flex-Z scale by referencing the graph on each label
- Choose the increment of adjustment up or down needed to achieve a good part
- Odorless, HAPs-free formula that meets new emission restrictions
- Works on any size or type of mould. Suitable for all open and closed moulding processes, from wet lay-up to RTM and Infusion
- Mainly No sealers required – saves time, saves money
- Easy application using any method - spray or wipe
- Easy cleanup
- High gloss with no streaking
- Predictable performance
- New **GLOSSCOAT** technology reduces prep time and eliminates streaking across the full range of application techniques, making retraining unnecessary.
- Reduces styrene build up - moulds stay cleaner longer
- Reduces gel coat "sag" on vertical surfaces

FLEX-Z 1.0	MINIMUM SLIP	- Inhibits pre-release and promotes tape adhesion.
FLEX-Z 2.0	LOW / MEDIUM SLIP	- Ideal for the occasional pre-release problem.
FLEX-Z 3.0	MEDIUM SLIP	- Standard choice for large hulls and flat areas.
FLEX-Z 4.0	MEDIUM / HIGH SLIP	- "Workhouse" – If you are in doubt, start here.
FLEX-Z 5.0	HIGH SLIP	- Excellent choice for small parts and high wear areas
FLEX-Z 6.0	EXTRA HIGH SLIP	- Use in difficult-to-release male moulds or as flange release.
