

Versa plus

Granudan recommends and distributes the Johnson Diversey TASKI Versa Plus mop with the purpose of minimizing the time of application, improve measuring and control of consumption, higher consistency with an uniform coating and an optimized working position in the big blade-moulds.

The Taski Versa Plus mop is the perfect sprayable mop for use in the WTG industry. It allows the worker to measure and control the exact amount of liquid used for each blade-mould. Very efficient and no waste of products.

After filling the bottle with liquid, simply place the bottle on the shaft, and create a vacuum by pulling the tap up and down!

By pushing the bottom on the top of the shaft, it allows the liquid to spray in front of the mop.

The mop is easy to clean, and you can buy different colors of bottles for each different products to be applied. E.g. a green bottle for Sealer and a Blue bottle for Release agent Remember 1 can only for cleaning purpose.
